## ATHERTON HIGH SCHOOL <br> Science: Forces

| 1. Key words |  |
| :--- | :--- |
| Centre of mass | Position in the centre of the object where the force of <br> gravity acts on the mass |
| Resultant force | Residual force in a given direction |
| Balanced forces | Opposing forces that are equal in magnitude |
| Unbalanced forces | Opposing forces where one force has a greater <br> magnitude |
| Pressure | Force applied over a given area |

## 2. Contact and Non-contact forces

| Contact | Non-contact |
| :---: | :---: |
| Friction | Gravity |
| Air resistance | Magnetism |
| Upthrust | Electrostatic |
| Thrust |  |

## 3. Newton's 3 Laws

1
If the resultant force on a stationary object is zero, the object will remain stationary or travel at a constant speed
The acceleration of an object is proportional to the resultant force exerted and inversely proportional to the mass of the object ( $\mathrm{F}=\mathrm{ma}$ )

3
For every action, there is an equal and opposite reaction

## 4. Hooke's Law

The extension of a stretched spring is directly proportional to the force applied

Science: Forces part 1

| 5. Equations |  |
| :--- | :--- |
| Weight | Weight $(\mathrm{N})=$ gravitational field strength $(\mathrm{N} / \mathrm{kg}) \times$ mass $(\mathrm{kg})$ |
| Resultant Force | Force $(\mathrm{N})=$ mass $(\mathrm{kg}) \times$ acceleration $\left(\mathrm{m} / \mathrm{s}^{2}\right)$ |
| Elastic potential <br> energy | Elastic $=1 / 2 \times$ spring constant $(\mathrm{N} / \mathrm{m}) \times$ extension ${ }^{2}(\mathrm{~m})$ <br> potential <br> energy $(\mathrm{j})$ |

## 6. Pressure in fluids

Pressure $=$ height $x$ density $\times$ gravitational field strength
$(\mathrm{Pa}) \quad(\mathrm{m}) \quad\left(\mathrm{Kg} / \mathrm{m}^{3}\right) \quad(\mathrm{N} / \mathrm{kg})$

Pressure increases with depth in a liquid.
Pressure decreases with altitude in air
